VACUUM SYSTEMS

Our story

Small steps, big results

Imperial Vacuum Systems is proudly an Australian family owned company, specialising in the manufacture of the Imperial range of Ducted Vacuum Systems. Our systems are designed and manufactured at our warehouse in Thomastown, Victoria. Using the largest amount of Australian made content possible.

Our family have over 28 years of experience in the supply, installation and service of Ducted Vacuum Systems to builders, trade and retail clients.

During this time we have seen and spoken with clients first hand about all of the areas where some Ducted Vacuum Systems fail to perform. With this knowledge we chose to take the next step and design and manufacture our own range - putting quality, reliability and ease of use first.

One of the main design features we incorporated in to our filter bag machines was the use of a 60 litre drum, to accomodate a 55 litre filter bag. This small difference ensures that even when the bag is 3/4 full, full suction is still maintained from the remaining space in the bag.

At Imperial Vacuum Systems, our team have a wealth of Ducted Vacuum experience, and lend our technical expertise to all of our clients by providing post-purchase technical support.

We believe that perfection is made when there is nothing left to add and nothing left to take away. This is a motto we use during the design and manufacturing process of all of our products.

Our team strive to exceed your expectations, and you can rest assured that Imperial Vacuum Systems will provide a positive experience, from purchase through to after sales support.

Hose and tool sets to suit every home

Pair your Imperial ducted vacuum system with a quality Imperial hose & tool set for the ultimate cleaning experience. We offer a solution to suit every home and budget. All sets come with quality components to ensure many years of hassle free use

Ideal for carpets and rugs

Imperial filter bag series

Imperial performance, ease of use and reliability come standard with the Imperial filter bag series.

All power units use a 55lt disposable filter bag, which only requires replacement 2 to 3 times per year. Our filter bag series come standard as weather resistant and this is ensured by using Australian galvanised steel. Our filter bag power units are manufactured, hand assembled, tested and packaged in Australia.
